Subject: RE: SS-25 Updates

I will provide another update shortly but my phone is acting goofy at the moment...Cameron did identify the wellhead seals aren't holding (like what happened at SS-44A)we tried pumping up the seals with packing and they wont hold full pressure....the well kill process should start in about an hour and if all goes well the well should be secured by this afternoon.

The site conditions appear to be stable at the moment.....and we continue to monitor for safety.

PS - my phone wouldn't pull up Scotts email for some crazy reason but I will try to resolve that by the next update...

Todd
